## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5 and 9, drawn to a power control circuitry, as depicted in figure 3b.
  - II. Claims 11-16, drawn to a method for stabilizing the power level of a signal to be transmitted, as depicted in figures 4a and 4b.
2. The inventions are distinct, each from the other because:

Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination Group II has separate utility such as a method for stabilizing the power level of a signal to be transmitted. See MPEP § 806.05(d).
3. Because these inventions are independent and distinct for the reason(s) given above and have acquired a separate status in the art as shown above by their recognized divergent subject matter and a different field of search is required for each group (see MPEP § 808.02), restriction for examination purposes as indicated is proper
4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of an invention or a species to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

5. The election of an invention or a species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

6. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. During a telephone conversation with Mr. Mark Saralino (Reg. No 34,243) on September 30, 2009, a provisional election was made without traverse to prosecute the invention of Group I, claims 1-5 and 9. Claims 6-8 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

***Examiner's Amendment***

9. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

10. Authorization for this examiner's amendment was given in a telephone interview with Mr. Mark Saralino (Reg. No 34,243) on September 30, 2009.

The application has been amended as follows:

*Claims 6-8 have been canceled.*

***Allowable Subject Matter***

11. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, none of the prior arts of record, in combination or individual, show or make it obvious a power control circuitry for controlling the output power level (Pout) of a signal (x(t)) to be transmitted at the output port of a variable-gain power amplifier wherein the power control circuitry having a current sense loop with an integrated comparator stage having a first input port supplied with a reference signal representing the nominal power level for the output power and a second input port supplied with a signal from a current sensor which is placed in the power supply line of

a variable-gain power and a feedback loop for feeding the reference signal derived from the feedback signal and a reference ramp signal. .

12. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
